# Greenup Eidsvold Station Annual Bull Sale

Bred to Perform. Fed to Last. Selected with Care.

## 140 Bulls

### Bred to Perform

Fertility and temperament are cornerstones of our breeding program, but just as important, is our focus on live weight output, turning cattle off earlier, and ease of finishing, with efficiency - key drivers of productivity and sustainability.

Greenup Eidsvold Station is the longest-running Breedplan-recorded Santa Gertrudis herd. Our deep bank of phenotypic data, combined with genomics, gives buyers confidence in our bulls' reliability to perform as predicted. We multiply the bloodlines that deliver results with consistency—and rigorously remove those that don't.

Bill & Gretchen Speed, of Brigadoon Cattle Co, are strong supporters of Greenup Eidsvold Station bulls, repeatedly investing in high-performing sires to drive genetic gain in their herd.

'We are breeding cattle to produce beef! The fact is, from the day I buy a Greenup Eidsvold Stn bull, he will continue to go forward. The next year, those bulls are 100-150 kg heavier than the day I bought them, and then continue to grow for another three years. We bought Eidsvold Stn Red in 2021. He was 827 kg and in the following years he's got up to 1400 kg. He is a very quiet bull - an exceptional doer with a perfect sheath.'

Bill Speed

Eidsvold Stn Red R540 (PS) as a five year old sire.

120 Poll/poll scur  
29 Homozygous poll  
98 Classified 'S' bulls

### Fed to Last

We present our bulls in fit condition, ready for immediate work, and set-up for a long working life. Their carcass and growth traits are expressed without compromising the bulls' short and long term ability to work, or their structural integrity and fertility.

Craig & Linda Brimblecombe have bought bulls from Greenup Eidsvold Station Studs for as long as Rick Greenup has been at the helm. They value the consistency, adaptability, and working longevity of their bulls.

'We look for free-moving bulls backed up by strong fertility, structure, objective carcass measurements, and eye appeal. We like the longevity of the Greenup bulls. They aren't overfed, so they acclimatise well and come out of the paddock after doing their job looking like the bull we purchased.'

Craig Brimblecombe

### Selected with Care

Standards, consistency and discipline produce extraordinary results. Temperament and structure are assessed at every handling.

The sale team was selected from a crop of over 750 bulls and is refined right up until sale day. Our standards result in bull returns that are less than 1 bull per 200 sold.

'It's the bulls that don't make it to auction that builds trust and confidence in our product. Our standards ensure our clients can depend on us to do the job on their behalf.'

Rick Greenup

## Bulls for the Bottom Line

↑ Bottom Line = ↑ Kilos + ↑ Price + ↑ Turnover + ↓ Costs

### Every Market Matters

Our industry's aim is to produce quality meat year after year, with environmental resilience in our cow herds, and make healthy profits.

'Our product is liveweight!  
We don't get paid on percentages - we get paid on kilograms produced and sold.'  
Dr Geoffry (Geoff) Fordyce

Versatile cattle with high marketability can secure market premiums and avoid costly discounting.

Highly marketable cattle are compatible with all major markets, attracting buyers at every age and weight range, and allow producers to fluctuate turn-off, adapt to the varying seasons and take advantage of market shifts.

Greenup Eidsvold Station Santas are selected for a maturity pattern to suit a range of markets, for each stage of growth and maturity.

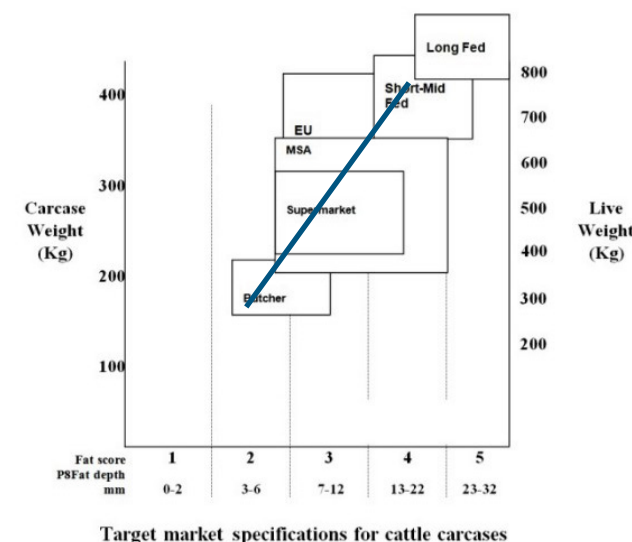

Figure 1. General weight range and fat cover guidelines for major beef markets.

Greenup Eidsvold Station Cattle maximise grid compliance and market versatility.

The constitution, feed efficiency, and finishing ability of Greenup Eidsvold Station Santas give you flexibility. When seasons or markets tighten, you can reassess, adjust your turn-off plan, and redirect cattle into different markets - where they will be sought after and valued.

Call it what you want - market versatility / marketability / grid compliance - it's more \$ for the bottom line.

Greenup Eidsvold Station - 100 day grain fed

Matching genetics to the environment is fundamental to good animal welfare. We breed for balance - matching market desirability with environmental suitability - retaining tropical adaptation such as looseness, hooded eyes, and slick coats for sun, heat and tick tolerance.

Greenup Eidsvold Station Santa Gertrudis are bred in tough forest and ticky country, selected for fertility under harsh conditions and meet our strict standards for structure and temperament.

Have your cake and eat it!

The right genetics allow you to produce more beef in less time with fewer inputs. Enjoy explosive growth, easy-doing, fertile cattle, without sacrificing the weight and value of your steers, cull cows and heifers.
